

ReDAT Reporting

Quality Management module for the analyses performing and their graphical projection

ReDAT Reporting is an analytical and reporting software module serves for advanced analyses performing, their subsequent projection, archiving and sending of email reports.

ReDAT Recording Systems, a business division of RETIA, a.s., which provides a sophisticated system for recording voice, screen and other relevant data. The system automatically analyzes the data to make it available to system users in a clear and structured way.

RETIA, a.s. is a Czech company based in Pardubice, founded in 1993. It develops, manufactures and modernizes radars, command and control systems, UWB localization and communication systems and ReDAT Recording Systems.

FEATURES

- Analyses performing and the forming of different types of reports and surveys.
- Works above the data from recording system database.
- Very intuitive.
- Resulting reports generated one-time or periodically.
- Predefined templates.
- Possibility to edit and create a new template.

INTEGRATION INTO THE REDAT

ReDAT Reporting does not have specific requirements for HW and SW. If installed, it will become part of ReDAT eXperience. The prerequisite for the operation of the module is only a valid license. The module is controlled from the GUI of ReDAT eXperience, where it is possible to save, display and export report results.

TEMPLATES

Templates define the output data and table layout (colours, graphics, company logo or full corporate style). ReDAT eXperience environment allows displaying, archiving, exporting and sending (via e-mail) of the resulting reports. ReDAT Reporting module is a very intuitive tool, able to process the specific requirements of its users.
