ReDAT Cloud Recording

Software for Calls Recording as a Service (SaaS)

Processing, administration and evaluation of recorded calls, as the operation must support and meet new requirements and demands. These challenges include changes in the field of initial costs reduction, security of stored records, availability from anywhere, operation reliability, scalability and customization to individual customer requirements. ReDAT Cloud Recording, with its useful features, supports and extends these new requirements with high availability from anywhere at any time.

BENEFITS

- minimal entry costs
- reduction of the operational costs for management and administration of recording systems
- availability of records anytime from anywhere
- system is operated by encrypted communication with the client
- storage of records in secured data centre with the audit trail of accesses
- flexibility of the customization of the virtual servers' performance to the current system monitored state
- quick implementation of record needs in other locations
- automatic implementation of new versions and system patches
- easy and fast extension of system features, including voice analyses
- system supervision 24x7x365
- guarantee of high availability of records in the DC
- prevention of crisis situations and failures
- regular system maintenance and development

COST REDUCTION

The cost reduction of the implementation and use of ReDAT Cloud Recording services is associated with a cost reduction that not only reduces the cost of initial purchase, but also costs associated with the regular maintenance of the system, training of professional staff, maintenance of the infrastructure, costs of the recording software's new versions, including the implementation of the partial components of the ReDAT Recording System.

SAAS SERVICE INCLUDES

- recording of the phone communication and screens
- archiving and replication of records into DC in EU
- availability of records from anywhere
- availability of advanced features of ReDAT eXperience
- possibility of voice analyses
- customization of services and performance parameters
- service support 24x7x365

SECURITY OF RECORDS

- long-term storage of records in the data centre certified for the security operations of IT service according to the regulation ISO 27001
- fully redundant operation of the data centre complying with the certifications Tier III (redundancy N+1)
- records encryption
- secured access to records
- security audit and system supervision
- all in compliance with the EU GDPR

Type of Service	basic	enlarged	analytical
